Capacity Development for Sustainable National GHG Inventories – AFOLU Sector

CD-REDD II REGIONAL WORKSHOP – QUITO, ECUADOR

10 – 13 May 2011

DRAFT PROGRAMME

Project context

As part of its commitment to the United Nations Framework Convention on Climate Change (UNFCCC), each non-Annex I Party must periodically prepare and submit a National Communication, which includes a comprehensive greenhouse gas (GHG) inventory component. Non-Annex I countries have made progress in preparing GHG inventories consistent with the requirements of the Intergovernmental Panel on Climate Change (IPCC), but there are still significant gaps in institutional capacity, methodological choice and data quality that are required to develop high-quality sustainable national GHG inventory systems.

Project objectives

The CD-REDD II Programme aims to build up in-country capacity to prepare a national GHG inventory for emissions and removals related to the Agriculture, Forestry and Land Use (AFOLU) sector, with focus on forest-related GHG fluxes in selected developing countries. The objective of this Project is to provide participating countries with the capacity to develop and report a national GHG inventory for the forest sector by 2012.

Workshop objectives

The main objectives of this workshop is to provide training on the 2006 IPCC Guidelines for the Agriculture, Forestry and Land Use (AFOLU) sector, with focus on forest-related GHG fluxes, and to exchange in-depth information about the development of GHG inventories from seven developing countries in order to plan for each country to implement activities scheduled in the framework of the Programme for 2011.
